Blue highlighted text indicates a primary or approximate color match. Black indicates a secondary color alternative.

PLEASE NOTE: Comparisons were based on color aspects only. Grain pattern, texture, embossing and gloss level may vary significantly between products. OMNOVA recommends that customers always compare aesthetic as well as performance characteristics of different products, and obtain actual samples of 3D Laminate, TFM, HPL and Edgebanding products before making a final selection. Comparisons should be made under optimal lighting conditions, such as controlled cool white fluorescent light.

PRECISE PATTERN MATCHING

The **Harmony Collection** offers a selection of popular patterns that are precision matched for color and design across our three product portfolios – Paper, Flat, and 3D Laminates.

BENEFITS

- Easily coordinate design, color, and grain across multiple constructions
- Selectively utilize different laminates for specific surface requirements
- Reduce development time with pre-matched patterns

CUSTOM CAPABILITY

The colors of our **Harmony Collection** can be customized to meet specific needs or to create unique appearances.

NO LIMITS

The samples here are only the beginning – upon request, matches can also be created of other popular OMNOVA patterns.

Though our laminates can be used in many applications, it is important for customers to select a laminate with durability and other performance attributes that match the requirements of the specific end-use application – not all laminates are suitable for all applications. Laminates used on exposed or horizontal surfaces of a product, for example, often require more durability than interior vertical surfaces. Customers should consider the OMNOVA Laminates Technical Specifications, processing requirements, the specific end-use environment and other application-specific factors when selecting appropriate laminates.
